Brief Introduction:

Carnosine has been proven to scavenge reactive oxygen species (ROS) as well as alpha-beta unsaturated aldehydes formed from peroxidation of cell membrane fatty acids during oxidative stress. Carnosine is also a zwitterion, a neutral molecule with a positive and negative end.

Like carnitine, carnosine is composed of the root word carn, meaning flesh, alluding to its prevalence in animal protein. A vegetarian (especially vegan) diet is deficient in adequate carnosine, compared to levels found in a standard diet.

Carnosine can increase the Hayflick limit in human fibroblasts, as well as appearing to reduce the telomere shortening rate. Carnosine is also considered as a geroprotector.

Application and Function:

1. Protects epithelial cell membranes in the stomach and restores them to their normal metabolism;
2. Acts as an antioxidant and protects the stomach from alcohol and smoking-induced damage;
3. Has anti-inflammatory properties and moderates production of interleukin-8;
4. Adheres to ulcerations, acts as a barrier between them and stomach acids and helps to heal them;
5. Inhibits activity of Helicobacter pylori bacteria;
6. Does not interfere with the production of prostaglandins essential to the mucosal lining of the stomach;

7.Strengthens these mucosal linings and stimulates production of protective mucous.
