

99% Purity CAS 5721-91-5 Test Decanoate (Test Deca) Raw Powder

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Test Decanoate
- Minimum Order Quantity: 1kg
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: Test Decanoate Powder
- CAS: 5721-91-5
- Synonyms: Test Decanoate;4-Androsten-17beta-ol-3-one Decanoate
- MF: C29H46O3
- MW: 442.68
- Purity: 99%
- Physical Form: White Crystalline Powder
- Shelf Life: 2 Years
- Melt Point: 38-42°C
- Storage Temp: Store At 8°C-20°C, Protect From Moisture And Light

Product Description

99% Purity CAS 5721-91-5 Test Decanoate (Test Deca) Raw Powder

Basic Information form Of TestDecanoate Powder:

Product Name	Test Decanoate powder
Synonyms	test decanoate;4-Androsten-17beta-ol-3-one Decanoate
Cas No.	5721-91-5
Chemical Formula	C ₂₉ H ₄₆ O ₃
Molecular Weight	442.68
Appearance	White crystalline powder
Purity	99.0%
Shelf life	2 years

What is Test Decanoate Powder?

Test decanoate powder, often referred to as "Test Deca powder".

Test Decanoate has been developed for medical use to treat low test, but like other anabolic test powders, it is also very appealing to users because it offers all the benefits you can expect from a test st when used for performance enhancement or test replacement purposes.

As you can see, test decanoate is unlikely to be the first choice for any bodybuilder wishing to use a pure test st, for the simple reason that its large esters result in a very slow release.

While the hormone itself is identical to what we find in more commonly used test compounds such as test enan, the test deca ester would make it difficult to reap the benefits in terms of performance enhancement.

Because of this slow activity, its positive benefits can be very delayed and may not even begin to have benefits until near the end of a normal-length cycle. This makes test deca less practical for many users of performance-enhancing compared to other test esters.

What does test decanoate do for the body?

Test Deca, in both oral and injectable forms, will provide the same benefits and effects as all esters of the test. The test itself is unchanged and retains its 100 anabolic and 100 androgenic ratings.

This can be used in two main ways:

As a test substitute in low-dose cycles, you need an external test source to maintain levels and function that are hormonally suppressed by other compounds caused Test deca itself can be used as a performance-enhancing compound at higher doses.

The effects of the test on the male body, when used at high doses, include:

- Increased nitrogen retention - A positive nitrogen balance is essential for muscle growth. If the nitrogen balance falls into negative values, the body will enter a catabolic state rather than an anabolic state and muscle will be lost. The test will promote nitrogen retention to higher levels than what is naturally achieved without the use.
- Enhanced protein synthesis - Encourages cells to make more protein, thus promoting muscle growth. Regular resistance training and the intake of high-quality protein foods also promote protein synthesis, and when combined with high doses of test, this process is significantly enhanced; forming the basis for the massive muscle growth you can achieve when using test decanoate.
- Increased IGF-1 production - This gh is essential for the anabolic action of skeletal muscle and more protein production. IGF-I also stimulates muscle satellite cells, a process that is needed to fuel the increase in muscle size.
- Increased red blood cell count - More red blood cells transport more oxygen-carrying hemoglobin and nutrients to the muscle, which means

better performance, improved endurance, and enhanced recovery through the ability of oxygen to remove more acid from the cells.

•Reduced levels of glucocorticoids - These stress hormones naturally increase during intense physical activity, and they lead to loss of muscle mass by causing loss of protein and a negative effect on insulin, an important anabolic regulator. Test lowers glucagon levels, so you can avoid this muscle loss and maintain anabolic effects.

Benefits of Test Decanoate Powder

The first thing about using test decanoate is that the effects can be very slow and therefore require a long cycle. For some users, the process will take much longer than you are usually acclimated to, which is enough to rule out the possibility of test decanoate.

If you decide to continue using this compound, once its effects finally kick in, you can expect all the benefits you would see with any other test ester. The hormone itself remains exactly the same. Test certainly has great benefits for bodybuilders or performance users, including:

- Muscle growth - You will find it easier and faster to gain lean muscle as long as you stick to high-intensity workouts. While the test is not the most powerful muscle growth or bulking we can use, it will provide high-quality gains that can be maintained.
- Muscle retention - When cutting you will remain in an anabolic state, so muscle mass is not being lost while on a calorie-deficient diet.
- Increased energy and mental focus - The test has many benefits, including optimizing sleep quality, improving energy and focus, and increasing sex drive. These are all natural functions of the test itself, all of which will have a positive effect on your bodybuilding goals.

Men who suffer from the low test will see substantial benefits such as reversal of low test symptoms such as loss of libido, weight gain, poor sleep, lack of energy, lethargy, lack of focus, and depression.

In short, all severe and debilitating low test symptoms- of which there may be dozens - will be reduced or disappear completely when using this (as long as their only cause is due to low test). Men who want to use test decanoate to treat low test should talk to their doctor and get medically tested before proceeding.

The test is the most important natural supplement for men, and its function and benefits for everyday health and improved performance cannot be overemphasized. Potential users of test decanoate need to understand the pros and cons of this particular test ester to weigh whether it is the right choice, as we have many other tests that may be easier to use.

Package and Shipping Of Test Decanoate Powder:

Under 25kg: inner: A PE bag in an aluminum foil bag; Outside carton

Over 25kg: inner: Double PE bags; Outside 25kg/fiber drum

Shipping of Test Decanoate Powder

Within 3-5 days after your payment

FAQ Of Test Decanoate Powder

Q1: Do you Accept Sample Orders?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit cards?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase a larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportation, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, etc.
